- 13 GOLA HORIZONTAL PROFILE** 8006 BRILL FINISH WITH EXTERNAL CORNER

ECOLOGICAL PANEL

Every year, wood amounting to about 6 MILLION TONS ends up in landfills or is burned

If we consider that wood was once used only once before being abandoned in landfills or burned, and that the needs of man, in constant growth, are difficult to meet with the natural cycles without serious imbalances for the environment, then the re-use of a resource in a repeatable manner becomes a crucial factor for sustainable development.

The Recycling of Wood is a Rational and Important Choice:

- 1 It contributes to the preservation of forests
- 2 It reduces the volumes going into landfills
- 3 It generates less environmental impact
- 4 It reduces greenhouse gas emissions

10,000 TREES SAVED EVERY DAY

Saviola's production process for the construction of the Ecological Panel® allows 10,000 trees to be saved every day. The wood collection takes place through its recovery from industrial and commercial companies, municipalities, utility companies, and public bodies.

Ecological Panel® is the best possible choice, because it creates an infinite cycle of wood. It is the first and only board to be 100% post-consumer recycled wood.

THE HEART OF SAVIOLA BEATS FOR THE ENVIRONMENT

Saviola, The Eco-Ethical Company, through eco-sustainability and the ethics of recycling, is the leading processor of post-consumer wood in the world, with 1.5 million tons processed every year.

The production philosophy is based on the recovery and reuse of a raw material that can be reborn and reused without the need to cut down new trees, through an economically and ecologically sustainable process.

100% POST-CONSUMER RECYCLED

WATER RESISTANT CORE PANELS

Replacing water damaged cabinetry and trim finishes cost homeowners millions of dollars each year in repairs. Saviola's core panels boast 13-hour water resistance while Innolac panels provide 9-hour water resistance. Gorgeous finishes with added protection from water incursions makes our Italian product line the definitive choice for fabricators and homeowners alike.

Non-Water Resistant Board After 13 Hour Soaking

Saviola Water Resistant Board After 13 Hour Soaking

ITALIAN THERMAL STRUCTURED VENEERS

Italian Thermal Structured Veneers (TSV) two-sided panels offer the elegance of high end European design with the benefits of 100% post-consumer recycled materials and 13-hour water resistant core for many finishes.

Available in 38 textures inspired by nature, TSV can meet the demands of any design challenge.
